Course Description

Pragmatics and Language Teaching, investigates both approaches to pragmatics and classroom practice. With an underlying focus in our readings and discussions on cross-cultural pragmatics, we will investigate the following questions: What is pragmatics? What are the core issues that define cognitive pragmatics? How can we integrate pragmatics in the classroom? How can it help classroom language teaching? How can pragmatics help us to understand student development? This is an introductory level graduate course on pragmatics and language teaching, and no background in this area is required.

The syllabus/schedule are subject to change.

Student Learning Outcomes

1 The student will be an active and engaged participant in discussions by analyzing, constructing and evaluating information presented within the lectures, external readings and class activities.

2. The student will describe and synthesize theory and instructional design as it relates to teaching and learning through empirically based research.
