Course Description

This course is a continuation of CSCI 525 (Networking I Local Area Networks). This course instructs students in the detailed operation and configuration of network routers and data switches. Laboratory exercises will be provided. Also, such common network security techniques as Virtual Local Area Networks (VLANs) and Access Control Lists (ACLs) will be presented along with other network security topics. Students will have the opportunity to work with routers and switches in the laboratory as they learn how these devices are configured and used in network design and implementation. Prerequisites: CSCI 525.

Labs: Students will have the opportunity to work with Routers and Switches in the laboratory as they learn to design and configure networks. The lab contact hours take place during the regularly scheduled class time. It is therefore important for students to keep up with the current schedule and to know when they are in lecture and when they are in lab (Jour 103). The approximate schedule for lecture and labs are listed below.

Student Learning Outcomes

Student Learning Outcomes:

- 1) Students will be able to use subnets and routing protocols, to design and to configure a router network.
- 2) Students will be able to design and configure a switched network and VLANs.
- 3) Students will be able to utilize the concepts of an Access Control List in configuring a router for ACLs.
- 4) Students will learn the basic concepts of Wide Area Networks and WAN components, and integrate the knowledge of subnets, routers, switches, VLANs, ACLs and WANs, into an understanding of modern digital computer networks.
- 5) Students will gain practical laboratory experience working with routers and switches in a modern network.

COURSE REQUIREMENTS

Minimal Technical Skills Needed

Students will use Microsoft Windows 10 Operating System. Students are expected to be familiar with MyLeo Online (D2L Brightspace).

TECHNOLOGY REQUIREMENTS

Browser support

D2L is committed to performing key application testing when new browser versions are released. New and updated functionality is also tested against the latest version of supported browsers. However, due to the frequency of some browser releases, D2L cannot guarantee that each browser version will perform as expected. If you encounter any issues with any of the browser versions listed in the tables below, contact D2L Support, who will determine the best course of action for resolution. Reported issues are prioritized by supported browsers and then maintenance browsers.

Supported browsers are the latest or most recent browser versions that are tested against new versions of D2L products. Customers can report problems and receive support for issues. For an optimal experience, D2L recommends using supported browsers with D2L products.

The syllabus/schedule are subject to change.

Maintenance browsers are older browser versions that are not tested extensively against new versions of D2L products. Customers can still report problems and receive support for critical issues; however, D2L does not guarantee all issues will be addressed. A maintenance browser becomes officially unsupported after one year.
