### **COURSE DESCRIPTION**

This course is designed for undergraduate students with a background in biology, cell biology and chemistry. This course provides students with a greater understanding of general concepts of pharmacology. First, specific drugs and sites of drug action are examined beginning with the autonomic nervous system. We then will focus on the pharmacology of the heart, the vascular and renal systems, followed by pharmacology of the respiratory system, and then endocrine system. Finally, we examine the pharmacology of central nervous system. Pre-requisites: BSC 303/CHEM 1411.

*The syllabus/schedule are subject to change.*

## **STUDENT LEARNING OUTCOMES**

Upon completion of this course you should be able to:

1. Tell the basic groups of endogenous proteins that are bound by drugs, the effects of drug binding on their molecular targets and methods for analyzing drug binding.
2. Discuss the chemical mediators and peripheral nervous system, components and basic physiology of cholinergic transmission and drugs acting on cholinergic system.
3. Articulate on the basic physiology of noradrenergic, 5-hydroxytryptamine and purinergic transmission and associated drugs.
4. Explain the importance of nitric oxide signaling; gain general understanding of adverse cardiovascular conditions and drugs used to treat these conditions.
5. Discuss about anti-inflammatory drugs and drugs used to treat respiratory, GI and kidney disorders.
6. Understand the basic concepts of endocrine and reproductive system disorders and associated drugs for treatment.
7. Explain the basic disease/disorder mechanisms of the central nervous system and know the major drugs acting on CNS.
