COURSE DESCRIPTION

This course introduces the student to the basic concepts and tools of analysis in microeconomics. Focuses on the operation of markets, with emphasis placed on the analysis of current problems such as health care, the environment, crime, education and regulatory reform. A major concern is how prices of individual goods and services are determined and how prices influence decision making.

STUDENT OUTCOMES

At the completion of this course, students are expected to understand (1) the core concepts of scarcity, opportunity cost, and how markets functions, (2) how firm and household choice is modeled as supply and demand in micro economics, (3) the conditions vital to well-functioning markets and those that create market failure.
