Lectures (Web Based Class): Meets 01/17/2023 through 05/12/2023

Required Textbook: "Inorganic Chemistry", Catherine E. Housecroft and Alan G. Sharpe (4th Edition, ISBN 978-0-273-74275-3)

Additional Book for your study of this course:

"Inorganic Chemistry", 5th Edition, Shriver & Atkins, ISBN: 1-4292-1820-7.

Course description: This course covers descriptive chemistry of more interesting elements and compounds and the standard topics in coordination, organometallic, solid-state chemistry, and catalysis and some industrial processes. Prerequisites are sound knowledge of general chemistry and familiarity with organic, physical and analytical chemistry. Regular attendance and active learning are expected. Students' questions and comments are welcome.

Student learning outcomes: At the end of the course, the student will be able; (1) to describe and explain the coordination compounds containing metal as central atom which surrounded by ligands; (2) to understand the stereochemistry of coordination compounds; (3) to classify the type and mechanism involve in coordination compounds reactions; (4) to study the characterization of coordination compounds and its application.

GRADING

Your performance and final grade in the course will be evaluated on the basis of total points earned. The distribution of points will be based on the following: Quiz and homework (20 points), which will be assigned and discussion throughout the semester. Two portion exams and final exam will carry 50 points and 30 points, respectively, with total 80 points. The exams will be taken on Commerce campus. The final letter grade will be based on a standard scale 90-100% A, 80-89% B, 70-79% C, 60-69% D, and below 60% F. The grades may be curved, if warranted.

There will be absolutely no make-ups for exams except extraordinary circumstance (notes required). If you miss an examination, you will be assigned a zero for that assignment. Quiz and homework not submitted on time may receive a grade of zero.
