Course Description

The syllabus/schedule are subject to change.

This course shall examine the concepts, ideologies, and research of human learning, with particular attention to the learner as a constructor of knowledge. The pragmatic application of learning theories to the development of the adolescent learner shall be emphasized.

This course provides a study of the educational implications of educational theory and other philosophical schools of thought. The course will stress the applications of these philosophies to the practice and implementation of curriculum, instruction, and student learning. Study of philosophical theories will assist in understanding the source of many popular opinions and perceptions regarding education including: the anxiety that education is adrift, the concern that educational aims are vague or conflicting, uncertainty about the role of education in a democratic society, and concerns regarding the relationship between theory and practice.

Student Learning Outcomes:

1. Discuss the historical context and leading philosophers of the schools of thought.
2. Discuss each of the theories/philosophies as they relate to the aims of education, teaching methods, curriculum, educational policy, and learning.
3. Develop and identify a personal teaching philosophy.
4. Explore contemporary philosophers' ideas and the applications of those ideas to secondary schools.
