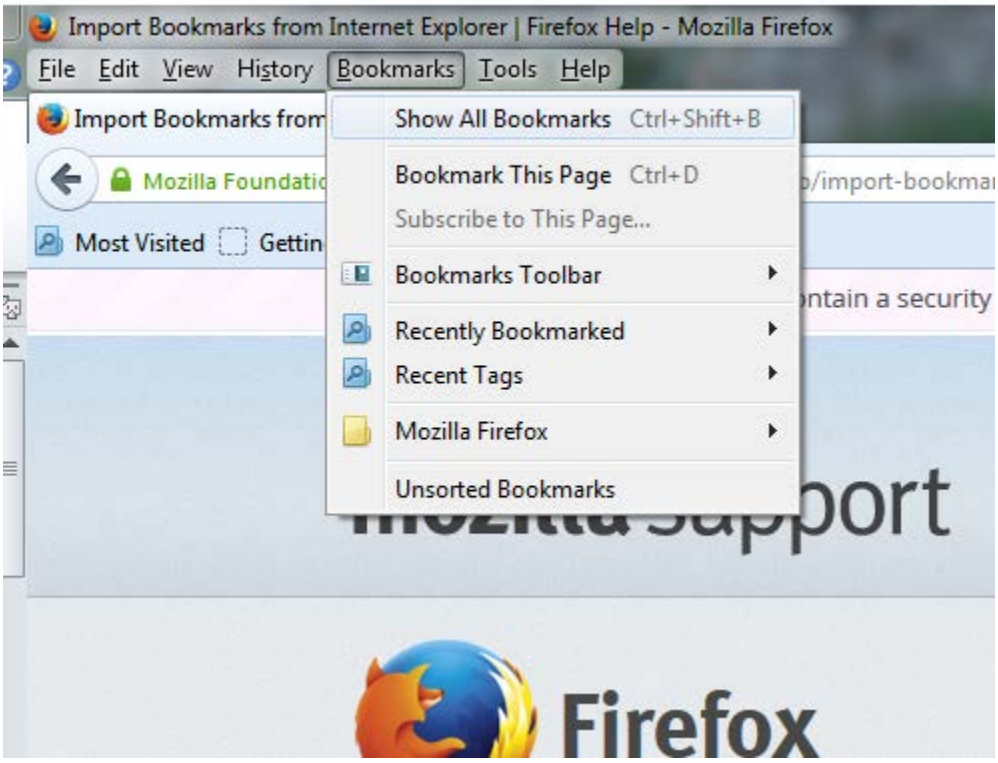
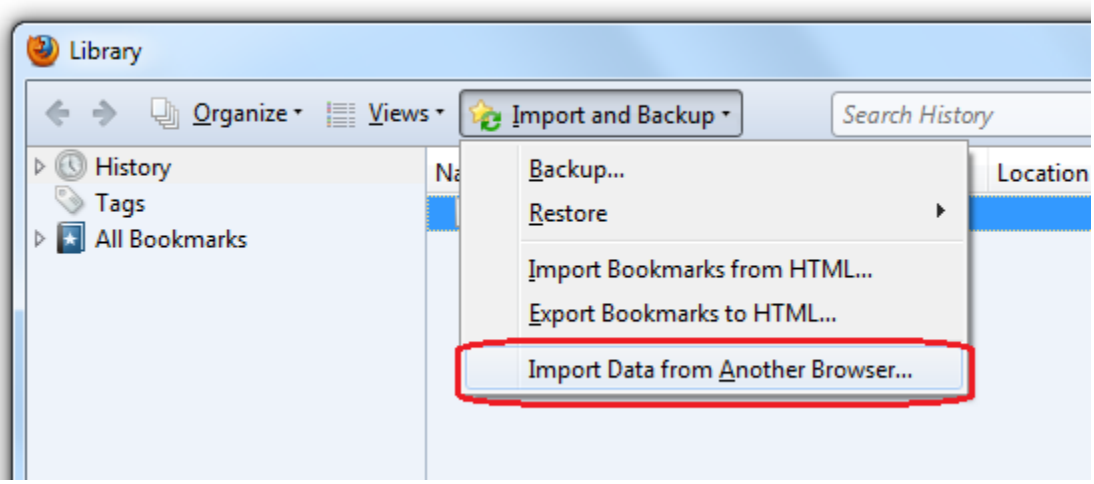
Importing Bookmarks and Settings from Internet Explorer to Firefox

1. Click the Bookmarks button on the top-left of the window and select Show All Bookmarks to open the Library window.

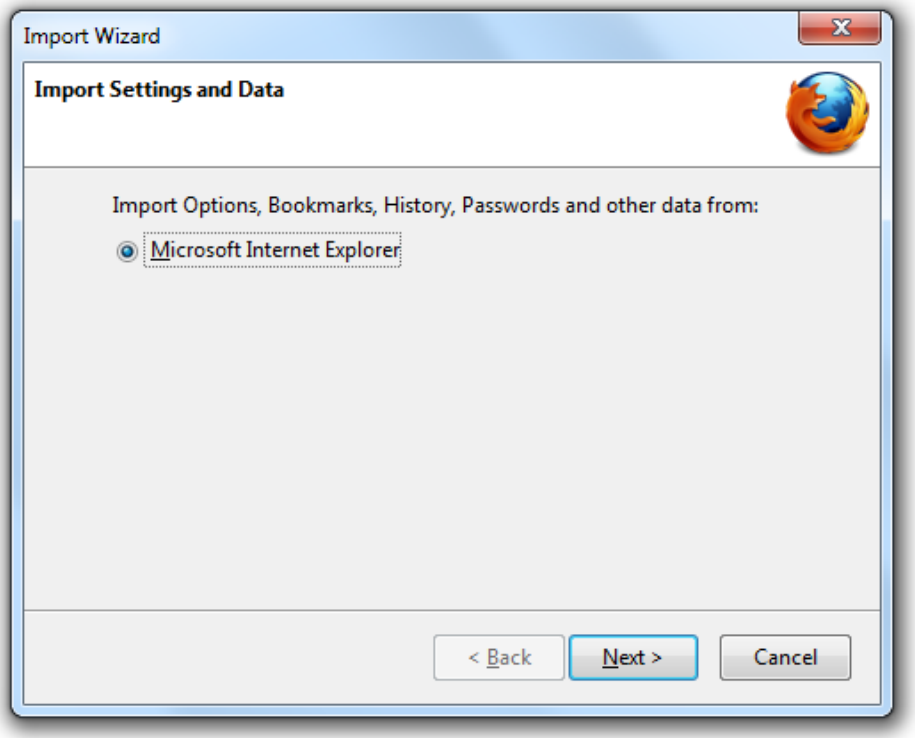


2. In the Library window, click Import and Backup and choose Import Data from Another Browser....

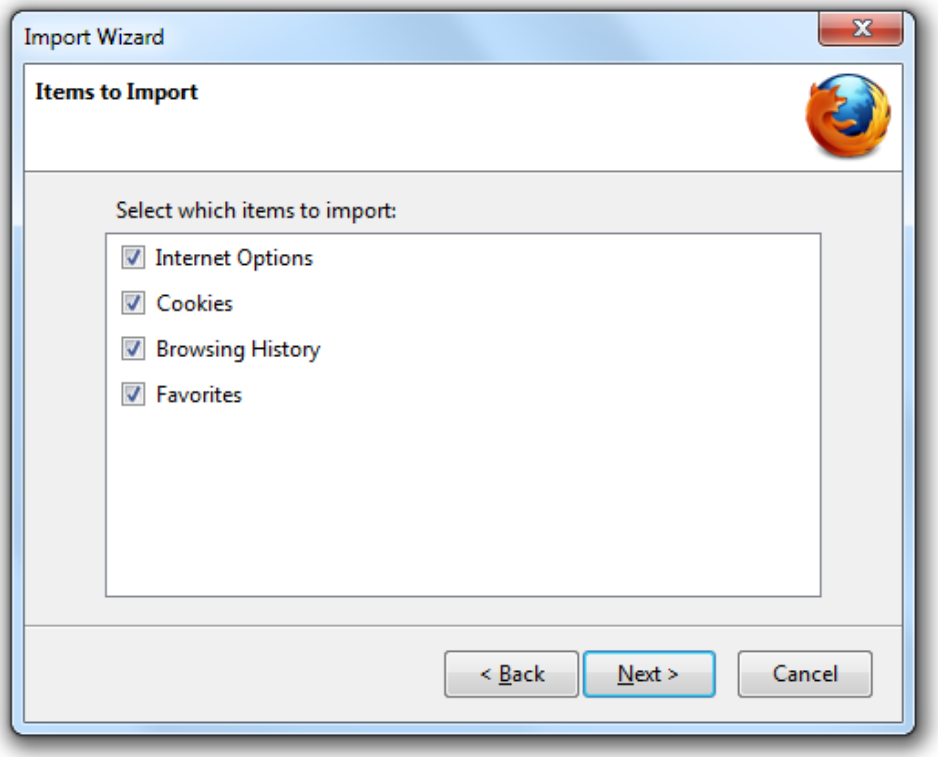


Note: If Import Data from Another Browser... is disabled (greyed out), this can happen if you are in Private Browsing mode. Close the Private Browsing window and try again.

3. In the Import Wizard window that appears, select **Microsoft Internet Explorer**, then click Next.

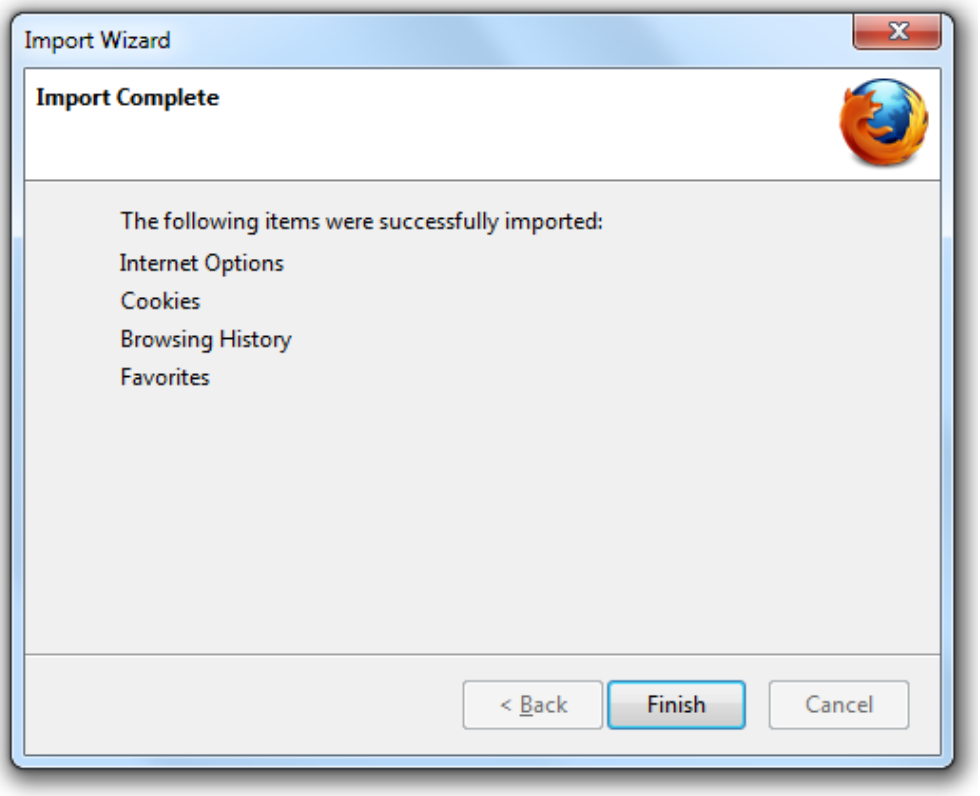


4. Firefox will list the types of settings and information it can import. Select the items you want to import, then click Next.



- **Internet Options:** General settings, including your home page. Since Firefox and Internet Explorer have different features, Firefox won't be able to import all of your settings.
- **Cookies:** Small bits of information stored on your computer by some websites that are used to keep you logged in, store your options, or do other things.
- **Browsing History:** Information on the sites you have visited.
- **Favorites:** Web pages you have saved in your Internet Explorer favorites.

5. Click Finish. The items you selected should now be imported.



- Your imported favorites will appear in the Bookmarks menu in a folder named **From Internet Explorer**. For more information on using bookmarks in Firefox, see How to use bookmarks to save and organize your favorite websites
